

Shop management System project – is a project for managing at first items and customers. In a project we have 2 models: Item and Customer;

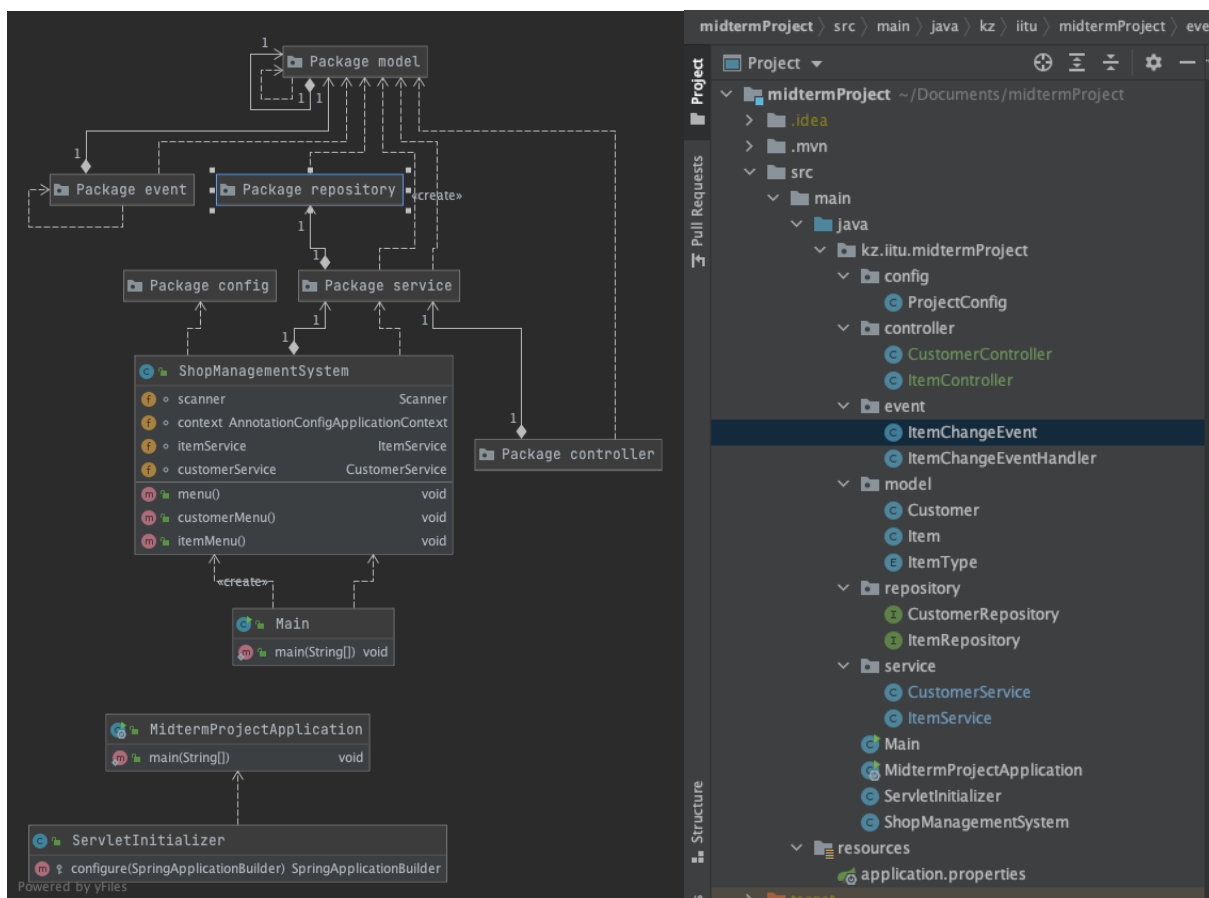

Customer Service:

- Retrieve all Customers
- Retrieve one Customer using Id.
- Add Customer, When a customer is added, sales order service should also create a copy of the customer in it
- Update Customer
- Delete Customer
- Should be Deployed on tomcat

Item Service:

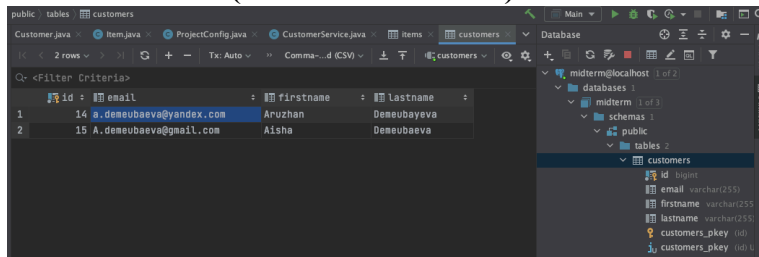

- Retrieve all Items
- Retrieve one Item with id*
- Add Item
- Update Item
- Delete Item

Project structure:

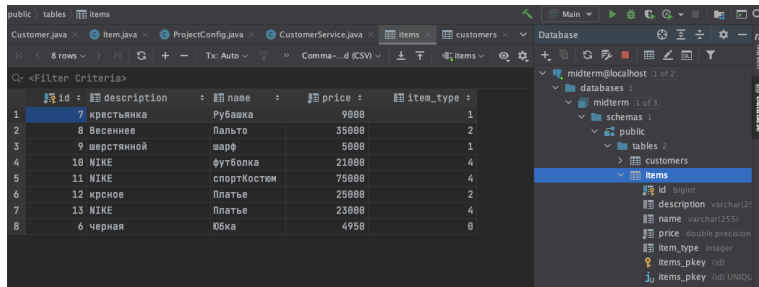

Added JpaRespository interface to interact with database.
